CREATING ENTREPRENEURIAL SPACE
CONTEMPORARY ISSUES IN
ENTREPRENEURSHIP RESEARCH

Series Editor: Paul Jones

Recent Volumes:

Volume 1: Innovating Women: Contributions to Technological Advancement; Edited by Pooran Wynarczyk and Susan Marlow

Volume 2: Social and Sustainable Enterprise: Changing the Nature of Business; Edited by Sarah Underwood, Richard Blundel, Fergus Lyon and Anja Schaefer

Volume 3: Enterprising Places: Leadership and Governance; Edited by Lee Pugalis and Joyce Liddle

Volume 4: Exploring Rural Enterprise: New Perspectives on Research, Policy and Practice; Edited by Colette Henry and Gerard McElwee

Volume 5: Exploring Criminal and Illegal Enterprise: New Perspectives on Research, Policy and Practice; Edited by Gerard McElwee and Robert Smith

Volume 6: New Perspectives on Research, Policy and Practice in Public Entrepreneurship; Edited by Joyce Liddle

Volume 7: New Perspectives on Entrepreneurship Education; Edited by Paul Jones, Gideon Maas and Luke Pittaway

Volume 8: Entrepreneurship and the Sustainable Development Goals; Edited by Nikolaos Apostolopoulos, Haya Al-Dajani, Diane Holt, Paul Jones and Robert Newbery

Series Editor’s Preface ix

Introduction: Creating Entrepreneurial Space: Talking through Multi-voices, Reflections on Emerging Debates
David Higgins, Paul Jones and Pauric McGowan 1

Chapter 1 The Legitimacy of Teachers in Entrepreneurship Education: What We Can Learn from a Literature Review
Stéphane Foliard, Sandrine Le Pontois, Alain Fayolle and Isabell Diermann 7

Chapter 2 Enterprise Education Competitions: A Theoretically Flawed Intervention?
Catherine Brentnall, Iván Diego Rodríguez and Nigel Culkin 25

Chapter 3 Understanding How Immigrant Entrepreneurs View Business Opportunity Formation Through Ethnicity
Kingsley C. Njoku and Thomas M. Cooney 49

Chapter 4 Context Matters: Entrepreneurial Energy in the Revival of Place
Johan Gaddefors and Alistair Anderson 63

Chapter 5 Extending Cross-gender Succession Theories: Mother–Son Succession in Family Business
Claire Seaman, Susanne Ross and Richard Bent 79
Chapter 6  SMEs’ Export Performance in Algeria: A Configuration Approach
Mohamed Yacine Haddoud, Paul Jones and Robert Newbery  91

Chapter 7  Resistance and Change in a Depleted Community: Personal, Pragmatic and Paradoxical
Lorraine Warren, Alistair Anderson and Jo Bensemann  113

Chapter 8  Grappling with the Challenges of Start-up in the Designer Fashion Industry in a Small Economy: How Social Capital Articulates with Strategies in Practice
Colleen E. Mills  129

Chapter 9  Exploring the Perceived Impact of Strategic Learning Plans on Growth-focussed Small Service Firms
Monica Murphy, Felicity Kelliher and Denis Harrington  157

Chapter 10  Scholarly Practice and Meaningful Research: Utilising Voice by Enabling Action … if it was only that Simple!
David Higgins and Sue Smith  175

SERIES EDITOR’S PREFACE

The Institute of Small Business and Entrepreneurship (ISBE)-Emerald book series aims to provide a platform for leading-edge research that reflects contemporary themes of interest to the entrepreneurship discipline. The volumes of this series are proposed and edited by established scholars drawn from the membership of the ISBE community. All contributions are double blind peer reviewed by subject experts from the discipline.

The ninth volume in the series, *Creating Entrepreneurial Space: Talking through Multi-voices, Reflections on Emerging Debates* edited by David Higgins, Paul Jones and Pauric McGowan has collected sufficient material to present two volumes. Particular thanks to David Higgins for leading the guest-editing process from project initiation to completion. These collections were developed in recognition of the need for the entrepreneurship literature to engage more critically with the lived experiences of practicing entrepreneurs through alternative approaches and methods, seeking to account for and highlighting the social, political and moral aspects of entrepreneurial practice (Tedmanson, Verduyn, Essers, & Gartner, 2012). Thus, this volume is an attempt to supplement and enhance this evidence base with studies drawn from several different contexts of entrepreneurial practice and behaviour.

Some words of thanks to conclude this introduction. To the guest editors, authors and reviewers for all their hard work and diligence in taking this volume to completion. To Katy Mathers and Pete Baker and the Emerald production team for their efforts in taking the volume through the production processes by the required deadlines. To ISBE, in supporting the development of the volume and its promotion.

In line with the objectives of the series, this volume contributes a new peer-reviewed body of evidence which provides fresh insights and perspectives and informs and further engages the entrepreneurship discipline.

INTRODUCTION

CREATING ENTREPRENEURIAL SPACE: TALKING THROUGH MULTI-VOICES, REFLECTIONS ON EMERGING DEBATES

David Higgins, Paul Jones and Pauric McGowan

ABSTRACT

This chapter provides a rationale and an introduction for this book. The organisation and structure of the book is identified and justified. Thereafter, each chapter included within the book is introduced and profiled. The chapter concludes by drawing brief conclusions on the book chapters included in this book with suggestions for further research opportunities and implications for the entrepreneurship discipline.

INTRODUCTION

Interest in the field of entrepreneurship/small business research has developed exponentially in recent decades (Maas & Jones, 2017). Scholars have sought to explore the subject area across a range of multidisciplinary fields of study, all of which aims to generate new research approaches and concepts, uncovering a wealth of new findings about how we can perceive entrepreneurial behaviour and the dynamics of the small firm (Marvel, Davis, & Sproul, 2017; Shepherd, 2015). The study of entrepreneurship/small firm involves the process of understanding and seeking meaning in behaviour and practice. However, concerns have been expressed regarding the need to engage more critically with the lived experiences...
of practicing entrepreneurs through alternative approaches and methods, seeking to account for and highlighting the social, political and moral aspect of entrepreneurial practice. The growing requirements to consider alternative perspectives in terms of how we engage with and study entrepreneurship from diverse perspectives is essential if the field is to effectively develop, by challenging the boundaries established through the adoption of dominant functionalist paradigms (Tedmanson, Verduyn, Essers, & Gartner, 2012). The study of entrepreneurship/small business research is demanding, complex and dynamic, shaped and influenced through human behaviour rendering prediction or certainty in findings difficult and challenging. Entrepreneurial behaviour is also influenced by cultural and technological change and evolution. This is not a conventional academic subject discipline, rather a multidisciplinary subject area requiring researchers to tackle areas of investigation by drawing upon different disciplines and approaches. By drawing recognition to the lived practice of the entrepreneur/owner manager, one can begin to position the notion of action as a process of socially constructed emergent practice; such a change in perspective requires a conceptualisation of what we understand entrepreneurship to be and how we theorise, research and develop new dialogue. Such discussion would seek to provide the community an alternative perspective as a method of re-shaping and understanding what it means to practice as an entrepreneur (Weiskopf & Steyaert, 2009).

The book aims to provide a thoughtful and contemporary discussion as a means of advancing the manner in which we think about and engage with various aspects of entrepreneurial practice and development. Entrepreneurship is still regarded by many as in the theory-building stage, which has lead commentaries to suggest that the field is still highly fragmented and in various stages of development. In such a case, it would be impossible to present a complete and detailed account of a field which has so many developing points of focus. The book brings together leading thinkers and researchers in the discipline to explore questions surrounding the social embedded and contextualised nature of entrepreneur/small firm owner/mangers. The book provides an opportunity for contributors to consider the main issues affecting entrepreneurial practice and develop insights about how we understand these issues more effectively from a critical perspective. The book seeks to inspire contributors and readers alike to think critically and reflexively about our own practice as a means of aiding and developing collective awareness of what informative approaches are to entrepreneurial practice and growth. Given the breath of the fields covered by entrepreneurship and small firm research, we sought to develop a publication which embraces and demonstrates the expanse of this literature, as such this publication encompasses a broad spectrum, in terms of topics and approaches, on diversity and critique in their perspectives towards entrepreneurial practice and scholarship.

For this publication we invited contributions which critically explore alternative dimensions to entrepreneurial/small firm research and practice. The book has equally sought to promote ideas from other research traditions and perspectives which culturally enriched and challenge what we term entrepreneurial/business research practice. The call for chapters received an excellent response from a
Introduction

range of countries such that we are able to publish two volumes. The following chapters are presented in this book:

Foliard, Le Pontois, Fayolle and Diermann’s chapter adopts a multidisciplinary perspective and questions the perceived legitimacy of entrepreneurship educators (EE) using a multidisciplinary literature review. The authors noted that the question of recognition of teachers’ professional status is not always addressed. The chapter suggests that the teaching models in EE remain experimental in the sense that they are seeking to confirm best practice and adapt to new emerging audiences and contexts. Certain content and practices are regarded as legitimate, others not and further research is required in order to offer clarity and robust evidence in relation to these issues (Fayolle, Verzat, & Wapshott, 2016).

Brentnall, Diego Rodríguez and Culkin’s chapter considers the value gained from enterprise education competitions for pupils in primary and secondary schools. The chapter tests some of the most prevalent stated beliefs from the psychology and education disciplines that such competitions motivate and reward young people, they enable skills development and learners are inspired by peers. The chapter provides novel insights for those who promote and practice the use of such competitions with a richer, more critical evaluation of the potential flaws within such activities.

In their chapter, Njoku and Cooney present a critical literature review examining how ethnicity relates to business opportunity formation through constant interactions. It introduces the visual mixed embeddedness framework as an empirical lens for understanding the differences in the business opportunity formation process models between immigrant and native entrepreneurs. By explaining how factors and traits from both home and host countries impact upon the immigrant entrepreneurial business activity process, the framework identifies how the concept of ethnicity influences immigrant entrepreneurial opportunity formation activities in different ways. The framework contributes to existing knowledge by offering a novel method for examining the influence on business opportunity formation of ethnicity, the role of home and host countries and variations between immigrant and native entrepreneurs.

Gaddefors and Anderson’s chapter provides a longitudinal ethnography of a rural small town in Northern Sweden. The chapter evaluates the presence and identifies the processes associated with an incoming entrepreneur, to more effectively understand entrepreneurship in a rural context. The significant shaping of entrepreneurship by context is increasingly recognised, with entrepreneurship in depleted communities an important element of this research movement. The chapter introduces the concept of entrepreneurial energy. Here, entrepreneurial energy is described as a vitality; produced in and by entrepreneurship. It operates in part, as a role model, holding up examples of what can be done. However, the presence of entrepreneurial energy serves to invigorate others. It becomes amplified in new ways of doing, novel ways of being, yet calcified in the entrepreneurial actions of others. The chapter discusses the outcome of this, how it unleashed the latent opportunity, promoted the possible, to entrepreneurially revive the town.

The chapter by Seaman, Ross and Bent considers the importance of succession in family business. Successful succession represents a key factor in the success of
individual businesses owned and run by families. The importance of gender in family business succession is an emergent topic, which has focussed on the trend for women to take on a family business as a successor. Minimal research, considers where a female leader passes on a business, whether that takes the form of family succession, a new leader from out with the family or indeed business sale. This dearth of research is not surprising: while female leaders in a family business context are not new, their numbers have been small and typically mediated through the lens of co-preneurship with a male partner. As women increasingly succeed to and found family businesses however, the gender dimension within family business succession develops and the research response forms the basis for this chapter.

Haddoud, Jones and Newbery consider the requirements for Small and Medium-sized Enterprise (SMEs) from developing countries to succeed in export markets. Empirical studies from these regions on SMEs’ internationalisation are nascent offering contrasting evidence to the literature from developed countries. To increase understanding on these issues, the chapter adopts a novel fuzzy-set comparative analysis technique to investigate the combination(s) of different resource factors driving Algerian SMEs’ export performance. The study identifies two distinct resource configurations likely to boost SMEs’ export performance. The chapter offers important implications for the internationalisation literature and the export promotion organisations in developing countries.

Warren, Anderson and Bensemann explore entrepreneurial change in Stanton, a rural small town in New Zealand. This town has suffered economically and socially as its industries have declined. Recently, the town has experienced a rejuvenation, partly due to the endeavours of a high-profile entrepreneur (Sue) who has set up several businesses. The chapter adopts an entrepreneurial identity perspective in examining how Sue’s arrival has transformed the town. The chapter employs a qualitative methodology based on semi-structured interviews. The contribution achieved is in demonstrating how an ascribed entrepreneurial identity can not only enable but also inhibit change in this community, generating confidence and emotional contagion around entrepreneurship, and also uncertainty and resentment. In doing so, the study challenges the universality of entrepreneurship benefits.

Mills’s chapter considers the gap in the creative enterprise literature through an examination of New Zealand fashion designers’ accounts of their responses to start-up challenges. The analysis, focussed on the relationship between social capital and reported strategic practice, revealed that the designers’ challenge profiles and strategic responses were linked to very ‘biographical’ personal networks and their personal enterprise orientations. The findings provide further confirmation of the importance of social capital and network management during start-up. But, most significantly, they demonstrate why designers need to be forward-looking and develop a strategic approach towards developing and accessing social and business decision-making as those that accessed social capital in ways that supported strategic responses that were more likely to have viable ventures than those who accessed social capital in order to react to unanticipated challenges.

Murphy, Kelliher and Harrington explore the perceived impact of strategic learning plans on growth-focussed small service firms from an owner-manager’s
(OM) perspective. Adopting a social learning lens, the chapter employs an action research method, involving three cycles performed over a 12-month period wherein they studied the co-created design and implementation of a strategic learning plan in three participant firms. Findings present insights into how firms that wish to grow can be facilitated to learn strategically. A contextualised approach involving OMs in both design and implementation resulted in openness to the formal planning process. Notably, OMs impede growth depending on their learning orientation, planning perspective and their ability to delegate tasks. Over time, the OMs refined their reflective skills to the benefit of organic learning strategies. There was a preference for social learning and perceived requirement for external monitoring to sustain plan momentum. The chapter offers a framework for embedding a strategic learning approach in order to leverage strategic position. It also highlights the value of considering and evaluating OM perceptions of their own learning activities and the impact such perceptions have on the enactment of enabling policies to promote firm growth.

In the final chapter of this publication Higgins and Smith consider the challenge of linking practice to theory has consumed debate for many years in academic communications, the questioning of what makes good research and how we generate actionable knowledge which can informed practice is always a point of conversation. The writers offer interesting points of discussion which draws upon current debates serve as important reminders for us to consider what we believe and how our values and beliefs as scholars are enacted through our own research practice. the chapter highlights the need for scholars to be thoughtful, attentive and willing to ask questions and challenge normal convention, by not taking for granted what we do as scholars and the research knowledge which is created. In this context the role of our own attentiveness, what it means to be reflexively aware, in our practice, as custodians of knowledge, becomes extremely important.

CONCLUSIONS

This book has provided a diverse set of contributions which offer novel insights into a range of different entrepreneurial contexts and entrepreneur/owner manager behaviour. The growth of the EE discipline continues globally with a desire to identify and reflect on best practice. This evidence here reflects on the requirement for effective experiential pedagogy and support systems (e.g. business competitions) plus the creation of internal and external university eco-systems to support entrepreneurial behaviour between student populations and the business community. Further research is required to critically evaluate such practice both in terms of design and longitudinal impact (Jones, Maas, & Pittaway, 2017). Such evidence will offer further justification for the value and contribution of the EE discipline. Thus, EE providers must consider the nature of their EE provision and look to evaluate its effectiveness. EE ecosystems must provide effective infrastructures to support the incubation and growth of entrepreneurial behaviour.
In terms of research exploring small business behaviour, we include several studies of entrepreneurial behaviour considering the role of ethnicity, the concept of entrepreneurial spirit, female succession within family firms, export behaviour in a developing world context, entrepreneurial change in a community, social capital in a business start-up and strategic learning to enable growth. These studies all critically explore alternative dimensions of small firm behaviour and practice. It is apparent that the SME sector is rich in emergent behaviour and cultural evolution. Thus it is critical that these new emergent behaviours are reported and evaluated in the academic literature. As reflected previously, entrepreneurship remains a nascent discipline with subdisciplines focussing on gender, social enterprise and family business emerging. Further research is required in all these areas plus the need to reflect on entrepreneurial behaviour in different academic disciplines.
